

Experiments on Average-level Confidence for GPT-3.5-Turbo and GPT-4-Turbo

Maryam Naderi

Here is the example of prompt for next experiment

```
{  
  'role': 'system',  
  'content': f"""You are a helpful assistant that corrects ASR errors. \  
You will be presented with an ASR transcription delimited by {delimiter} characters,\  
and your task is to rectify any errors in it. \  
Provide the most probable corrected transcription in string format. \  
Do not change the case, for example, lower case or upper case, in the transcription. \  
Do not output any additional text that is not the corrected transcription. \  
Do not write any explanatory text that is not the corrected transcription.  
"""  
}
```

First step

We obtained the results, along with their associated sentence-level confidence scores, from the “exp_without_sentence_confidence” for both GPT-3.5-Turbo and GPT-4-Turbo.

Histogram of the average-level confidence scores of the Librispeech transcriptions

Based on the histogram on last slide, we changed the range of threshold.

Threshold = [0.5, 0.55, 0.6, 0.65, ..., 1.0]
